

## PLEASE READ BEFORE USE

- **Do not use these pins to line up holes forcefully!**
- **Do not use a pin if it becomes bent!**
- **The pins in this kit are not specified to be hardened by the instructions from Beechcraft, and therefore have not undergone any hardening process. It is possible they can become bent during use should flight control forces be applied while they are installed. This is especially true regarding the small diameter pins. As a precaution, we suggest the control surface be supported to help maintain rigging hole alignment during pin use.**
- **Keep pins lightly coated with corrosion preventative oil.**

*A small amount of grease on the pin tip can aid in the installation and removal. Scratches do not render these pins unserviceable and may occur under normal use.*
